25X1X

The following details on the hydro power plant in GEVAN (44°57'E/
40°43'N), Armenian SSR were reported:

1. The transformer station was constructed on a hill, about 250 - 300 feet above the turbinehouse, which was built into the rock of this hill.
2. The transformer station consisted of the East station and the West station. The East station was equipped with seven large transformers, six in operation and one in reserve. The West station had two smaller transformers. It was planned to enlarge the West station to the size of the East station.
3. No shipments of material or constructions were observed. A power transmission line from the power plant to the YERVAN Aluminum Plant was in operation. Presumably an additional line to YEROVAKAN was not completed. For plant layout see Annex.

25X1A

Comment:

The report confirms and supplements previous information on the transformer station of the hydro power plant at the SRYAN Lake.
